INTERNSHIP REPORT

Submitted by

SUBASHREE R

BACHELOR OF ENGINEERING

in

COMPUTER SCIENCE AND ENGINEERING

CHETTINAD COLLEGE OF ENGINEERING & TECHNOLOGY

KARUR

Acknowledgement:

I would like to express my sincere gratitude to **Cybernaut** for providing me with the opportunity to undergo my internship as **Full Stack Development Intern**. This internship has been a valuable learning experience that helped me gain practical exposure to real-world software development practices.

I express my heartfelt thanks to the management and technical team of **Cybernaut** for their guidance, support, and encouragement throughout the internship period. Their mentorship helped me understand industry standards, project workflows, and professional responsibilities.

I also extend my sincere gratitude to the **Principal, Head of the Department**, and all the teaching and non-teaching staff members of **Chettinad College of Engineering & Technology** for their continuous support and motivation, which made this internship possible and grateful to everyone who directly or indirectly contributed to the successful completion of my internship.

CHETTINAD COLLEGE OF ENGINEERING & TECHNOLOGY

BONAFIDE CERTIFICATE

Certified that this internship report titled “**CYBERNAUT – FULL STACK DEVELOPMENT INTERN**” is the bonafide work of **Ms. SUBASHREE R**, who has successfully completed her internship as a **Full Stack Development Intern** at **Cybernaut** from **09.02.2026 to 09.04.2026**, in partial fulfillment of the requirements for the award of the degree of **Bachelor of Engineering in Computer Science and Engineering**.

Introduction:

Cybernaut is a growing IT services and software development company that focuses on delivering innovative and practical technology solutions. The company provides high-quality services in web development, application development, and emerging technologies.

Cybernaut plays a key role in bridging the gap between academic learning and industry requirements by offering internships and training programs for students. It emphasizes hands-on learning, real-time project development, and skill enhancement, helping students gain practical exposure to modern tools and technologies.

The company works on various domains such as web applications, automation tools, and data-driven solutions. It follows a structured development process that includes requirement analysis, design, development, testing, and deployment.

Our Expertise Includes:

- **Real World Projects:** Providing hands-on experience by working on real-time industrial challenges.
- **Industry-Ready Skills:** Offering training in cutting-edge technologies and methodologies to meet industry standards.
- **Practical Learning Environment:** Simulating workplace scenarios to bridge the transition from academia to industry.
- **Soft Skills Development:** Enhancing communication, teamwork, and problem-solving abilities for holistic growth.
- **Career Readiness:** Preparing students to succeed professionally with a focus on both technical and interpersonal skills.

Designation:

During my internship at **Cybernaut**, I worked as a **Full Stack Development Intern**. The internship duration was from **09th February 2026 to 09th April 2026**.

Technologies Used

- Frontend: **React.js**
- Backend: **Node.js, Express.js**
- Databases: **MongoDB**
- Tools: **Git, Postman**

Work Report:

Work Carried Out:

During my internship at Cybernaut under the guidance of Ms. Dharshana and team.

Month 1 (February 2026 – March 2026)

Project Worked On Employee Record System

The primary objective of this project was to develop a user-friendly contact management system that simplifies storing and organizing personal or professional contact details. The system includes modules for adding, updating, deleting, searching, and managing contact information through a centralized web application.

Project Understanding, Requirement Analysis & System Design

During the first month of my internship at Cybernaut, I focused on understanding the organization, project scope, and system requirements of the Employee Record System Project.

Activities Performed:

- Studied and understood the project objectives and overall system functionality
- Identified user requirements and key features needed in the system
- Analyzed functional and non-functional requirements
- Designed the system architecture and workflow
- Created database structure and defined entities (tables/collections)
- Planned user interface layout and navigation flow
- Prepared basic diagrams (ER diagram / flowchart) for better understanding
- Finalized system design for development implementation

Modules Studied:

- **Employee Management Module** – Stores and shows all employee details.
- **Add Employee Module** – Used to add new employee information.
- **Update & Delete Module** – Used to edit or remove employee records.
- **Search & Filter Module** – Helps to quickly find employees.
- **User Authentication Module** – Allows secure login for users. Learning

Outcome:

- Improved problem-solving and logical thinking skills
- Gained experience in designing user-friendly interfaces
- Learned how to analyze project requirements effectively
- Understood the importance of data security and validation
- Developed debugging and testing skills

Project Worked on Product Inventory System

The primary objective of this project was to develop a user-friendly product inventory management system that simplifies tracking and organizing product details. The system includes modules for adding, updating, deleting, searching, and managing product information such as stock levels, pricing, and categories through a centralized web application.

Project Understanding, Requirement Analysis & System Design

During the first month of my internship at Cybernaut, I focused on understanding the organization, project scope, and system requirements of the Product Inventory System project.

Activities Performed:

- Attended orientation sessions to understand company policies, development workflow, and project lifecycle.
- Studied the objectives and scope of the School Management System, which aims to digitalize academic and administrative processes.
- Analyzed functional and non-functional requirements of the system.
- Understood the three-tier architecture (Frontend, Backend, Database).
- Set up development environments for Angular, Node.js, and Express.js.
- Learned REST API architecture and request-response mechanisms.
- Explored MySQL for relational data and MongoDB for flexible document storage.
- Practiced API testing and debugging using Postman.
- Used Git for source code version control.

Modules Studied and Implemented

- **Product Management Module** – Manages all product details like name, price, and description in one place.
- **Stock Management Module** – Monitors and updates product quantities to maintain accurate inventory levels.
- **Add Product Module** – Allows users to add new products to the inventory system.
- **Update & Delete Module** – Enables modifying product details and removing unwanted products.
- **Search & Filter Module** – Helps users quickly find products using different criteria like name or category.

Learning Outcome:

- Learned to design and manage databases for storing product and stock details.
- Gained experience in implementing CRUD operations (Create, Read, Update, Delete)
- Improved skills in frontend and backend integration
- Understood how to build a complete and user-friendly web application

ENG IN 10:40 20-04-2026

Month 2 (March 2026 – April 2026)

Project Worked on Complaint and Feedback System

The primary objective of this project was to develop a user-friendly complaint and feedback management system that allows users to submit complaints and provide feedback efficiently. The system includes modules for user registration, submitting complaints, tracking complaint status, and managing feedback through a centralized web application. Administrators can view, update, and resolve complaints, ensuring effective communication and timely responses. This system helps improve service quality and user satisfaction by providing a structured approach to handling issues and feedback.

Project Understanding, Requirement Analysis & System Design

During the second month of my internship at Cybernaut, I focused on understanding the organization, project scope and system requirements of the Complaint and Feedback System project.

Activities Performed:

- Analyzed project requirements and identified key features
- Designed database schema for complaints and user data
- Developed user authentication (login/register) system
- Implemented complaint and feedback submission module
- Created functionality to view and track complaint status
- Built admin panel to manage and resolve complaints
- Integrated frontend with backend and database
- Performed testing and debugging to ensure smooth functionality

Modules Implemented:

- **User Authentication Module** – Handles user registration and secure login
- **Complaint Submission Module** – Allows users to submit complaints or feedback
- **Complaint Management Module** – Enables admin to view and manage all complaints
- **Status Tracking Module** – Lets users check the progress of their complaints
- **Update & Resolution Module** – Allows admin to update status and resolve issues
- **Search & Filter Module** – Helps find complaints quickly based on criteria

Learning Outcome:

- Gained knowledge of building a complaint and feedback management system
- Learned to design and manage databases for storing user and complaint data
- Improved skills in implementing CRUD operations
- Understood frontend and backend integration
- Learned how to handle user authentication and data security
- Developed problem-solving, testing, and debugging skills

Project Worked on Contact Manager-TripMate

The primary objective of this project was to develop a user-friendly contact management system that simplifies storing and organizing personal or professional contact details. The system includes modules for adding, updating, deleting, searching, and managing contact information through a centralized web application.

Project Understanding, Requirement Analysis & System Design

During the first month of my internship at Cybernaut, I focused on understanding the organization, project scope, and system requirements of the Contact Manager project.

Activities Performed:

- Attended orientation sessions to understand company policies, development workflow, and project lifecycle.
- Studied the objectives and scope of the School Management System, which aims to digitalize academic and administrative processes.
- Analyzed functional and non-functional requirements of the system.
- Understood the three-tier architecture (Frontend, Backend, Database).
- Set up development environments for Angular, Node.js, and Express.js.
- Learned REST API architecture and request-response mechanisms.
- Explored MySQL for relational data and MongoDB for flexible document storage.
- Practiced API testing and debugging using Postman.
- Used Git for source code version control.

Modules Implemented:

- **User Authentication Module** - Handles user registration and login to provide secure access.
- **Add Contact Module** - Allows users to create and store new contact details.
- **Edit & Delete Contact Module** - Enables updating or removing existing contacts.
- **Search & Filter Module** - Helps users quickly find contacts using search or filters.

Learning Outcome:

- Clear understanding of real-time project planning and system architecture.
- Improved knowledge of backend-frontend interaction.
- Gained experience in professional development tools and workflows.

Conclusion:

The internship at Cybernaut gave me good practical experience in software development. I worked on projects like Contact Manager, Product Inventory System, Employee Record System, and Complaint and Feedback System.

Through these projects, I improved my technical skills, problem-solving ability, and understanding of web application development. Overall, this internship helped me gain confidence and prepared me for future IT career opportunities.
